

Chapter 10

Circles

10.1 Lines and Segments That Intersect Circles

10.2 Finding Arc Measures

10.3 Using Chords

10.4 Inscribed Angles and Polygons

10.5 Angle Relationships in Circles

10.6 Segment Relationships in Circles

10.7 Circles in the Coordinate Plane

10.1 Lines and Segments That Intersect Circles

Circle Vocabulary

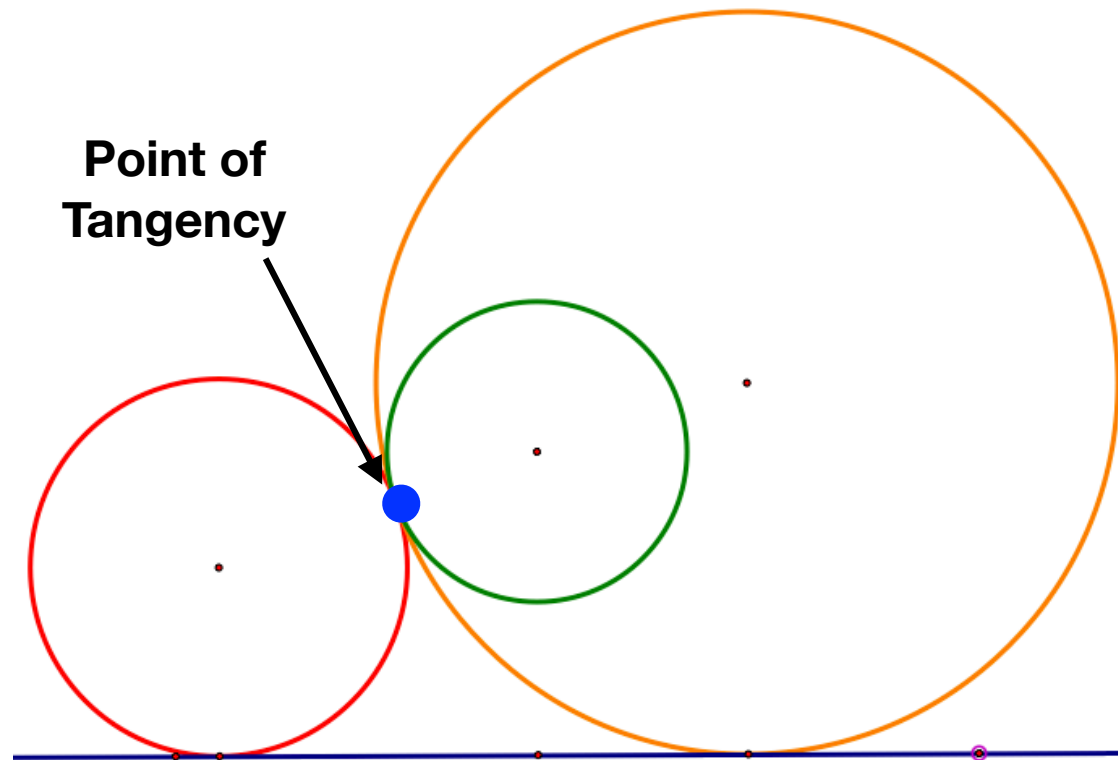

- Center (Circle D)
- Diameter
- Radius
- Chord
- Secant
- Tangent
- Point of Tangency (POT)

10.1 Lines and Segments That Intersect Circles

Tangent Circles

- Coplanar circles that intersect in one point are called **tangent circles**.

10.1 Lines and Segments That Intersect Circles

Concentric Circles

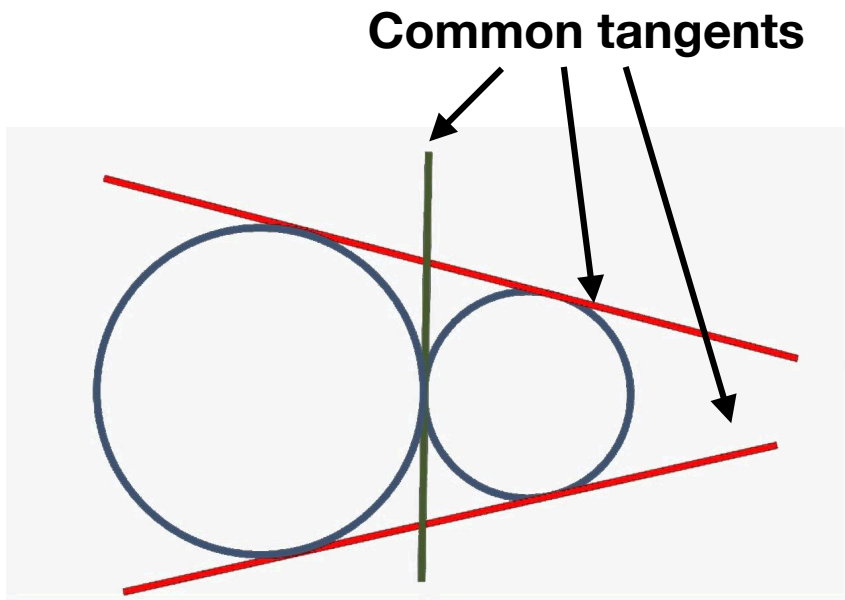

- Coplanar circles that have a common center are **concentric circles**.

10.1 Lines and Segments That Intersect Circles

Common Tangents

- A line or segment that is tangent to two coplanar circles is called a **common tangent**.

10.1 Lines and Segments That Intersect Circles

Theorem

Tangent Line to Circle Theorem

In a plane, a line is tangent to a circle if and only if the line is perpendicular to a radius of the circle at its endpoint on the circle.

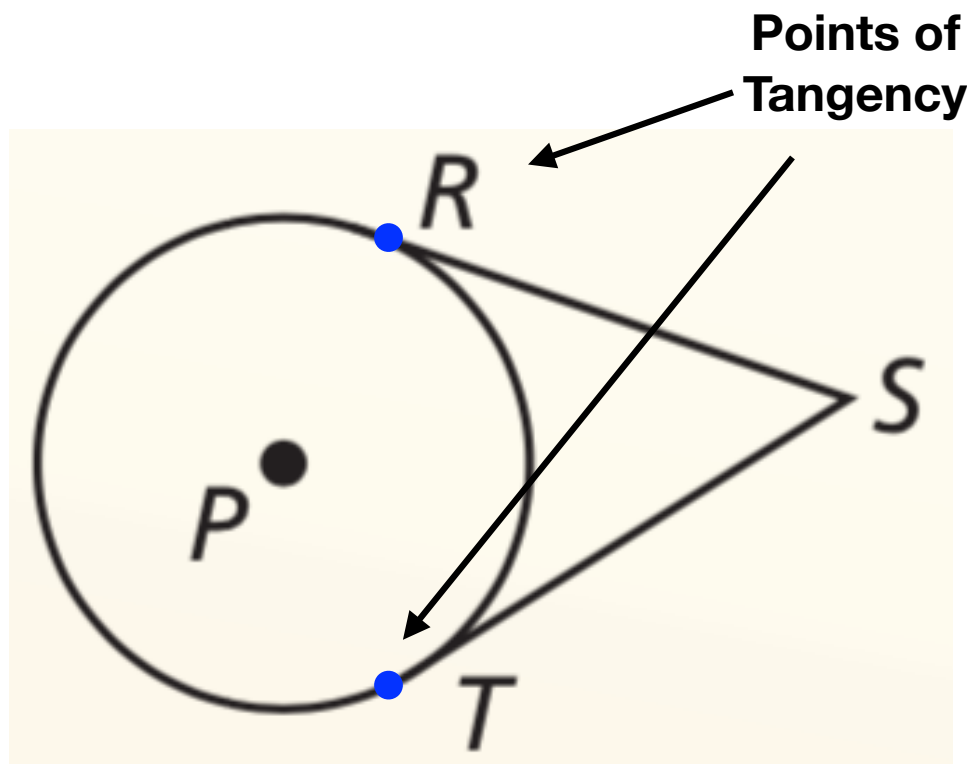

Point of
Tangency

10.1 Lines and Segments That Intersect Circles

Theorem

**External Tangent
Congruence Theorem**

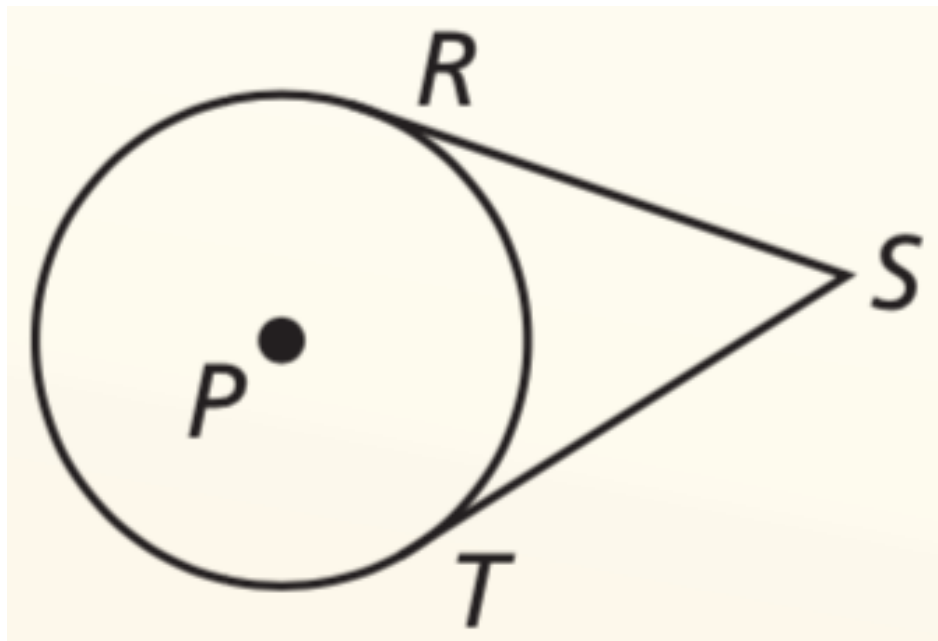

Tangent segments from a common external point are congruent.

10.1 Lines and Segments That Intersect Circles

Construct a Proof

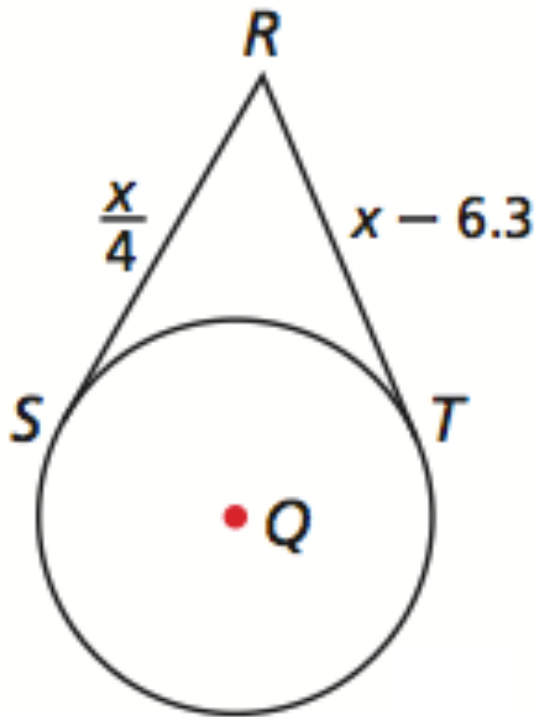

Given that SR and ST are tangents,
prove SR is congruent to ST .

10.1 Lines and Segments That Intersect Circles

Examples

a) Solve for RS

b) Solve for $m\angle Q$
