

# Chapter 10

## Circles

10.1 Lines and Segments That Intersect Circles

10.2 Finding Arc Measures

10.3 Using Chords

10.4 Inscribed Angles and Polygons

10.5 Angle Relationships in Circles

**10.6 Segment Relationships in Circles**

10.7 Circles in the Coordinate Plane

# 10.6 Segment Relationships in Circles

## In the Real World

A shard of a Greek discus was found in an archaeological dig.

What was the original diameter  $PR$ ?

# 10.6 Segment Relationships in Circles

## In the Real World

Use inscribed angles and similarity to find the diameter  $PR$ .

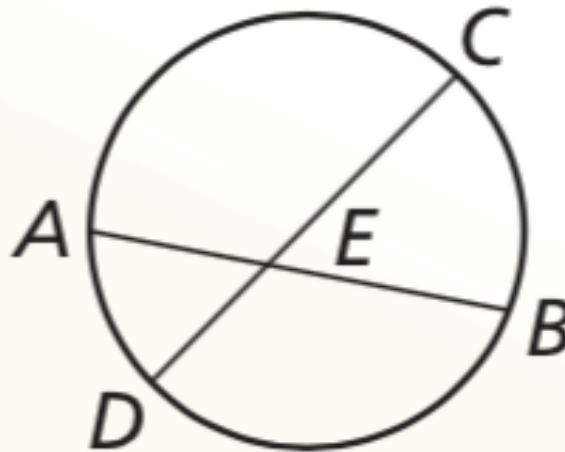

# 10.6 Segment Relationships in Circles

## Theorem

### Segments of Chords Theorem

If two chords intersect in the interior of a circle, then the product of the lengths of the segments of one chord is equal to the product of the lengths of the segments of the other chord.

$$EA \cdot EB = EC \cdot ED$$

## 10.6 Segment Relationships in Circles

### Example

Calculate ML and JK.

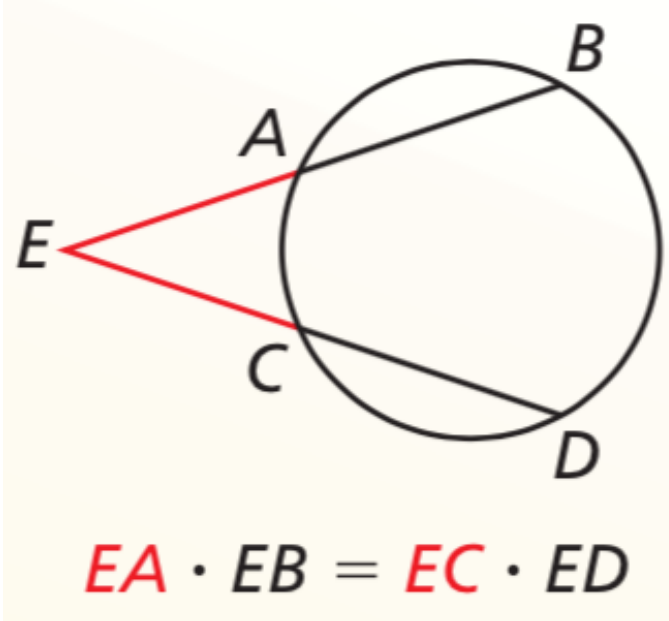

# 10.6 Segment Relationships in Circles

## Theorem

### Segments of Secants Theorem

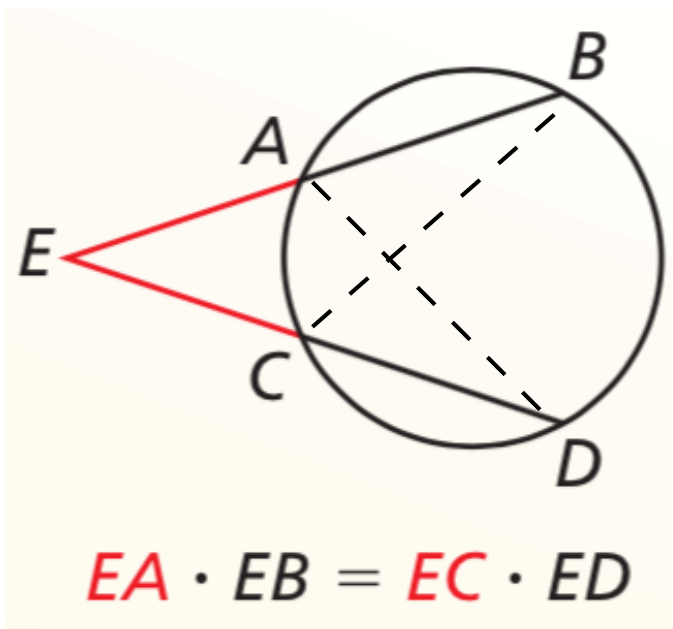

If two secant segments share the same endpoint outside a circle, then the product of the lengths of one secant segment and its external segment equals the product of the lengths of the other secant segment and its external segment.

outside • whole = outside • whole

# 10.6 Segment Relationships in Circles

Why?

outside • whole = outside • whole

# 10.6 Segment Relationships in Circles

## Theorem

### Segments of Secants and Tangents Theorem

If a secant segment and a tangent segment share an endpoint outside a circle, then the product of the lengths of the secant segment and its external segment equals the square of the length of the tangent segment.

# 10.6 Segment Relationships in Circles

## Examples

Calculate  $x$ .
